Arina Prokopenko

Full Stack Developer | Android Specialist
Moscow, Russia

Summary

I am an experienced Android and Full Stack Developer with over
3 years of experience in building high-performance and scalable
applications. I specialize in Android development using Kotlin,
Jetpack Compose, and modern architectural patterns such as MVP,
MVVM, and Clean Architecture. I focus on performance optimization
and backend integration through REST APIs and WebSocket.

Additionally, I have experience in developing server-side solutions
using Node.js and TypeScript, as well as setting up CI/CD and
DevOps processes with Docker, Jenkins, and Kubernetes. My core
strengths include effective project management, improving business
process accuracy and speed, and working in cross-functional teams.

I am always eager to take on new professional challenges and offer
innovative solutions for building high-quality, scalable applications.

Experience

Комус
Full Stack Developer
June 2024 - Present (10 months)
Moscow, Moscow City, Russia

Logistics and Optimization

Android: Developed an app with data collection terminal (DCT) integration,
reducing errors and speeding up order processing by 30%. Utilized Kotlin and
Jetpack Compose.
Node.js Backend: Built a backend with NestJS and TypeScript, decreasing
server response time by 40% and enabling real-time data sync (REST API,
WebSocket).
Python Desktop: Developed a PyQt desktop app, increasing data accuracy
and reducing request processing time by 25%.

CI/CD and DevOps: Set up automated deployment with Docker, Jenkins, and Kubernetes, achieving uptime with less than 1% downtime.
Technologies: Kotlin, Node.js, TypeScript, Python, Docker, Kubernetes.
Experienced in full-cycle development for logistics, focusing on enhancing process accuracy and speed.

ООО "ТехноМаш"
Android Developer
September 2024 - Present (7 months)
Moscow, Moscow City, Russia

Architecture & Development: Built scalable apps using MVP, MVVM, and Clean Architecture for maintainability and flexibility.
Performance Optimization: Reduced response times and optimized resource use through code profiling and refinement.
Backend Integration: Integrated seamlessly with REST APIs and WebSocket; ensured stable server communication, caching, and error handling.
Quality Assurance: Set up CI/CD, applied TDD, and automated unit/UI testing for high app reliability.
Tech Stack: Expert in Kotlin, Coroutines, Jetpack, Dagger/Hilt, RxJava, Firebase (analytics & push notifications).

-
Android Developer
August 2021 - Present (3 years 8 months)

As an Android developer, I had a wide range of responsibilities and made a significant contribution to the success of projects. Here are some of my key responsibilities:
· Application development: I participated in the full cycle of mobile application development, from requirements analysis and user interface design to testing and performance optimization.
· Kotlin and Java Programming: I have developed high quality code in the Kotlin and Java programming languages, following modern development standards and best practices.
· API Integration: Involved in the integration of applications with external APIs, ensuring efficient data exchange between the application and the server.
· Architectural Design: Used modern architectural patterns such as MVVM and Clean Architecture to create scalable and easily maintainable applications.
· Performance Optimization: Actively worked to optimize application performance, improving loading speed, response and resource consumption.

· Testing and Debugging: Performed unit and integration level testing as well as debugging and bug fixing to ensure stable operation of applications.
· Meeting Deadlines: Effectively managed project timelines and met deadlines.
· Team Collaboration: Worked as part of a team of developers, designers and testers, ensuring effective collaboration and achievement of common goals.
